

A circular chord diagram illustrating the interactions between various bacterial and fungal taxa. The taxa are arranged around the perimeter of the circle, and the chords represent the connections between them. The taxa include:

- Actinobacteria
- Proteobacteria
- Agaricomycetes
- Dothideomycetes
- Euromycetes
- Tremellomycetes
- Lecanoromycetes
- Strombilales
- D_2_Oxy

The diagram shows a complex network of interactions, with prominent connections between Actinobacteria and Proteobacteria, and between Agaricomycetes and Dothideomycetes. The chords are color-coded to represent different types of interactions or taxonomic groups.

Agaricomycetes

Tremellomycetes

Sordariomycetes

Pezizomycetes

1_2__Alphaproteobacteria

unidentified

D_2_Blastocatellia (Subgroup 4)
